Description			
Vendor list --> Why are we adding the recently Added vendor on top of the page with serial number one? Is this a requirement? Else we need to add at the end of the list and navigate the user there when a new record is created.

As discussed, there is no such requirement, we are bringing latest data on top. Sr.no column represent just a number for count it will not define any order or value, Any how we added one more column called vendor Id next to sr.no coloum
